

INTERNAL REVIEW WORKSPACE - RULES R001-R015

Every claim,
checked against
every rule. Every
decision, yours.

ClaimGuard runs payer rules deterministically, explains each finding with grounded AI, and records every reviewer action in a hash-chained audit log.

R004 Prior authorization

• FAIL

R009 Required documents

• UNABLE

15 rules evaluated · 2 issues · 1 needs evidence

PRINCIPLES

Built so that a reviewer can defend every outcome.

Deterministic rules

R001-R015 run as code against payer policy. Same claim, same result, every time.

Grounded AI

Explanations cite the claim fields and policy clauses they rely on, with a confidence score.

Human oversight

AI never decides. A reviewer confirms, dismisses or requests information on each finding.

Auditability

Every event is hash-chained to the one before it, so tampering is detectable.

WORKFLOW

From intake to decision in four steps.

01

Claim received

JSON, CSV packs or FHIR bundles are normalised into one claim model.

02

Rules evaluated

Fifteen payer rules run and return a status with the fields they read.

03

Evidence inspected

The reviewer sees evidence and an AI explanation side by side.

04

Reviewer decides

Confirm, dismiss with reason, request info or send for re-check.

RULE EXAMPLES

Findings come with evidence.

Each rule returns PASS, FAIL, UNABLE_TO_ASSESS, NOT_APPLICABLE or needs review, and cites the exact fields it read.

INSPECTING FINDING

R004

Prior authorization required

Fail · Policy §4.2 — Advanced imaging requires prior authorization.

Evidence

```
claim.lines[0].cpt      = "72148"
policy.auth_required[72148] = true
claim.prior_auth_ref    = null
claim.attachments[]     = []
→ result: FAIL
```

Explanation

The claim bills an MRI of the lumbar spine without contrast (72148). Under this plan, advanced imaging needs a prior authorization number, and the claim carries none. No attachment mentions an authorization either.

Confidence 94% · Grounded in `policy §4.2` `lines[0].cpt` `prior_auth_ref`

Drafted by AI. It explains the finding; the rule result is deterministic.

Review action

1 Confirm issue
The finding stands and the claim stays failed.

2 Dismiss
The rule does not apply here. A reason is required.

3 Request information
Ask the provider for what is missing.

4 Mark corrected
The provider fixed it. Queue a re-check.

Press 1 to 4 to choose with the keyboard. Every action is written to the audit trail.
